

FOR IMMEDIATE RELEASE: June 3, 2021

Monitored Air Purification Installed in HOACNY

East Syracuse, NY – Hematology-Oncology Associates of CNY (HOACNY) has installed the IoT Right monitored Indoor Air Quality (IAQ) solution with Active Pure Technology in the Brittonfield, Community and Auburn facilities. This monitored air Purification solution expands the capabilities of the filtration that HOA is currently using within their facilities to address not only COVID 19 but also numerous other air and surface contaminants.

“We are excited to have installed the Active Pure and IoT Right technologies to protect our patients and staff,” explains HOACNY’s CEO, Maryann Roefaro. “Providing the safest environment for our patients and staff and using cutting edge technology is at the core of our mission to provide the highest level of quality care in a healing environment.”

By installing the brand new IoT Right IAQ solution within the existing HVAC systems, HOA is able to fight and destroy contaminants on surfaces and in the air almost immediately, around the clock and all year long. Additionally, the monitoring platform ensures that the systems are running effectively and alerts the staff if there is a problem. This non-stop air purification combats thousands of microscopic contaminants that not only include COVID-19 but other viruses, mold, odor-causing bacteria, pollen, mildew and dust.

How it Works

Air and water molecules are drawn into the ActivePure Air Scrubbers which have been installed into the buildings' existing HVAC system. Once inside the air purification system, this technology turns oxygen and water molecules into pathogen hungry Hydroxyls (friendly-yet-powerful oxidizers) that are dispersed back into the HOA space. These "healthy" molecules fight and destroy contaminants on surfaces and in the air in real time.

The IoT Right sensor package is installed in conjunction with the Air Scrubbers to monitor the power to the unit as well as the humidity and airflow around the Air Scrubber. This information is then sent to the IoT Right Smart Building platform which enables HOA staff to monitor the effectiveness of the system at all three locations from a single dashboard. Additionally, the system is set up to send alerts to staff when there is a problem with any of the Air Scrubbers.

"IoT Right is very excited to partner with HOA to provide our Monitored Air Purification Solution and help them create a safe and healthy environment for their patients and staff." says Michael Marley, IoT Right CEO. "We look forward to expanding our relationship and continuing to develop solutions with HOA."

The system was installed by Postler and Jaeckle Mechanical Contractors with support from IoT Right. The Brittonfield location went online in February. This was followed by the Onondaga Hill facility, and most recently the Auburn facility.

Hematology-Oncology Associates of CNY was established in 1982 with a vision to serve the community by providing the highest level of quality care to patients dealing with cancer and blood disorders. With office locations in Auburn, East Syracuse and Onondaga Hill (Syracuse), plus a Wellness Center in Camillus, HOA continues that vision with a multifaceted team dedicated to holistic, patient-centered care. The only cancer practice in CNY Certified for Quality by The American Society of Clinical Oncology, HOACNY also serves as the only certified oncology medical home in New York State.

IoT Right is an innovative IOT Solution provider developing smart building solutions by partnering with our customers to address their business needs. Based in Syracuse NY, the IoT Right team builds customer-centric solutions that provide actionable data for not only the efficient management of your building, but also occupant centric solutions which provide a safe and secure environment in which to work.
